

1. On **paper**, #1 - Make an ArrayList "CD" of Songs. The ArrayList will represent all the songs on a CD.

#2 - Calculate the running time of the CD given:

```
class Song {  
    double getDuration() {}  
}
```

2. In **Eclipse**, make an ArrayList of Students and add each of your classmates. Then use this ArrayList to work out the most popular eye color.

```
class Student {  
  
    private String eyeColor;  
    private String name;  
  
    double getEyeColor() {}  
}
```

3. On **paper**, calculate how many pencils need to be sharpened

```
class Pencil {  
    boolean isBlunt() {}  
}  
ArrayList<Pencil> pencilCase;
```
